

Thermal packaging 

ISOTHERMAL PP CONTAINER

CATEGORY

Isothermal Packaging

Large Containers

DESCRIPTION

Isothermal packaging provides an excellent thermal barrier.

The extremely low, high-density thermal conductivity makes packaging made from this material ideal for long-duration transport or exposure to extreme outside temperature conditions, etc.

Ideal for particularly delicate products that require complete assurance of maintaining their thermal properties. This packaging offers the best isothermal performance on the market, with the added benefit of being reusable.

FEATURES

- ✓ Isothermal
- ✓ Reusable
- ✓ Heavy Duty

DETAILS

- High-capacity isothermal containers, made up of exterior packaging in cardboard or polypropylene and an interior composed of high-density polyurethane foam panels laminated with kraft and aluminium. These containers are particularly suitable for the transport and storage of products that require maximum thermal protection, as the high insulating power of the polyurethane walls gives these containers great autonomy. The use of the container together with accumulators or the option of dry ice makes them suitable for long-duration transports. These unprinted containers are available from a single unit.

ADVANTAGES

- High thermal insulation capacity. Great resistance to impacts, abrasions, etc. Easily customisable in dimensions and formats. Different thicknesses of polyurethane to optimise the desired response of the product. Optionally printed based on the quantity requested. Inclusion of dividers, etc., according to needs. Technical department advice for the proper adaptation of the product. Possible incorporation of a cardboard pallet, perfectly integrated into the set.
