

REUSABLE BOXES

CATEGORY

Packaging and shipping

Reusable packaging

DESCRIPTION

We design and manufacture reusable packaging in corrugated polypropylene. The main advantage over rigid plastic packaging is that they can be folded, reducing storage and transport costs as they occupy much less space than rigid ones.

The production of this packaging does not require the creation of molds, as dies similar to those used for corrugated cardboard are sufficient, and the possibility of customizing the packaging makes them more attractive to customers.

FEATURES

- ✓ 100% Recyclable
- ✓ Reusable

POLYPROPYLENE BOXES

Custom packaging

- We design and manufacture custom Corrugated Polypropylene packaging.
- In foldable or semi-rigid format, we adapt to the sizes your reusable packaging needs.
- Heat sealing systems ensure the mechanical properties of this packaging.
- The packaging is customizable.
- Different colors and formats make this reusable packaging system the most agile on the market.

Packaging for fish

- Our corrugated PP boxes reduce EPS consumption in the fish industry, providing a safer, more ecological, and sustainable system.
- Reusable and washable, they can enter reverse logistics circuits.
- They are customizable packaging, thus serving as a branding tool for your products.
- We have standard formats or can manufacture to measure, being completely watertight if necessary.
- They are presented folded, thus reducing the space they occupy in storage, transport, or boats.

Packaging for the pharmaceutical industry

- Our PP packaging is suitable for entering clean rooms and clean spaces that require maximum hygiene.
- Self-assembling formats, presented flat and customizable for use in different spaces.
- With weights adjusted to mechanical and cost needs, designed to be reusable or single-use.
- They can be manufactured in different colors to indicate production processes or types of products.
