Packaging and shipping

Cardboard pallets

DESCRIPTION

CLICKair is the most efficient logistics system in the Cardboard Pallet family. With a block height of just 35mm, it is the ideal system for stacking boxes inside a container.

As a result of exclusive design, CLICKair can be used as a base for boxes or as a load separator. Its lightweight, weighing less than 1.5kg, makes it especially suitable for air transport. This reduced weight also directly impacts the reduction of CO2 emissions into the atmosphere during transport processes.

Customizable in size and printing, it serves as a great marketing element for your products. It is a kit unaffected by NIMF15 regulations, making it the best option for export.

FEATURES

- ✓ 100% Recyclable
