Containers for liquids

DESCRIPTION

The 4LIQUIDS liquid container is our system for transporting liquids of up to 900 square litres. Its square shape, along with reinforced corners, allows it to be stackable both in storage and during transport.

Manufactured with a self-assembling base, it significantly reduces assembly time and the container's components, making it the most efficient square liquid container on the market. Like our ODL1000, the 4LIQUIDS can come with a pre-mounted bag, which automates the assembly process to the maximum.

With minimum orders of 40 units, we adapt to your needs as much as possible, we can customise the product with your branding, and we can adjust the size to reach up to 1000 litres.

FEATURES

- ☒ World Star Packaging Award
- ☒ Liderpack Award
- ☒ Liquids
- ☒ 100% Recyclable
- ☒ Bulk goods
- ☒ Heavy Duty
