

LARGE CONTAINERS

CATEGORY

Large containers

Reusable containers

DESCRIPTION

We can manufacture any size of container in cellular polypropylene, combined with plastic, wood, or cardboard pallets, to create reusable containers suitable for the most demanding industries. These containers can be customised and include accessories such as document holders, windows, closures, etc., to ensure that the container meets all the needs of your products.

- Container made from PP Alveolar.
- From 1000 to 3000 grms/m².
- High durability and resistance.
- Pallet and lid made from reinforced high-density PE.
- We adapt to the actual needs of the product, creating interiors or modular formats. Replaceable closure systems on the base and lid in case of breakage.
- Collection service for broken containers for replacement and recycling.
- Available sizes 1200x800 and 1200x1000.
- Made from cellular polypropylene.
- We adapt to any size, using both plastic and wooden pallets.
- High durability and resistance.
- Closure systems on the base and lid with Velcro, clips, etc.
- Customisable with the client's branding.
- Option for different box colours depending on quantity.

FEATURES

- ☑ Heavy Duty
- ☑ 100% Recyclable

PLASTIC PROTECTION

- Our technical design team creates protection and fastening systems for containers of all sizes.
- We work with cellular polypropylene, alveolar materials, foams, etc.
- These systems are delivered folded or placed in the container to save space in the warehouse.
- We work with different weights and thicknesses to provide the best strength and durability for the product.
- Fastening and anchoring systems for products to ensure they are perfectly immobilised.

ECO-DESIGN

- We work with mono-material products to make recycling easier and more efficient.
- Our design process is based on maximum weight and space efficiency to reduce CO2 emissions.
- Through research into new plastic materials, we reduce the amount of plastic used while maintaining or improving the mechanical properties of the products.
- We remove damaged containers, replacing them with new ones and managing waste disposal.
