

WOODEN KIT

CATEGORY

Large containers

Industrial packaging kits

DESCRIPTION

We design and manufacture industrial folding kits with wooden reinforcements to meet the most demanding mechanical needs, considering not only weight and stacking resistance but also expansion.

In many cases, the deformation of containers is caused by their use for bulk products and the force of expansion, which is why wooden reinforcements help solve these issues.

- The Reinforced Kit with wood is our Heavy Duty kit.
- All components of the kit are presented within this fold.
- We add wooden reinforcements to the kit to improve stacking capacity and reduce deformation in bulk products.
- Designed for heavy and bulk products, all the wood in the kit can be treated for export.
- We also use wooden elements as internal spacers.
- In a base+ring+lid format, it is the ideal kit for storing and transporting heavy products and has excellent dynamic load performance.

FEATURES

- ☒ Heavy duty
- ☒ Foldable.
- ☒ 100% Recyclable
- ☒ Reusable
