KITS embalaje industrial

DESCRIPTION

The Extra Long packaging kit is characterized by its large dimensions. It can be manufactured in an enveloping format with two U-shaped pieces, one lower and one upper, forming the body of the container, with wooden reinforcements on the sides to close the container.

In this case, the kit is produced according to the weight specifications and expansion strength of the product to be packed. We also offer the option to provide custom wooden pallets for the container. The other manufacturing option is a foldable kit format but with specially designed or manufactured pallets for these types of needs.

These kits are especially suitable for long and heavy products. Their composition, along with the wooden side reinforcements, forms a solid block that makes them suitable for packaging bulk products of significant weight, such as metal rods or elongated structures.

- The Xtra Long Kit is designed for long and heavy products. Composed of cardboard formats in a U-shape, side covers, wooden reinforcements, and pallets or wooden bases, it creates a highly resistant packaging for load, flexion, and stacking.
- Boxes longer than six meters can meet your needs.
- Fully customizable and suitable for all types of exports using fumigated wood.
- They are delivered completely flat, occupying only the space of a sheet of cardboard.

FEATURES

- ☒ Heavy duty
- ☒ 100% Recyclable
