

FOLDABLE KIT

CATEGORY

Large containers

Industrial packaging KITS

DESCRIPTION

The foldable kit consists of a container stapled to a pallet tailored to the perimeter of the container, according to the specifications of volume, weight, loads, and stacking of the products to be packaged.

The container offers two options for a top closure: with flaps or with a lid. In both cases, it is presented folded and pre-assembled for use. This reduces assembly, storage, and transport costs as the space it occupies in the warehouse is equal to the perimeter of the pallet and it can be assembled with a simple opening motion.

This packaging kit is especially suitable for medium-weight products and large volumes.

- The foldable kit consists solely of a pallet made of cardboard, wood, or plastic and a cardboard box.
- The box format can be fefcos 200-201-203 and can have windows or specific die-cuts to meet different needs.
- They are fully customizable in printing or in cardboard qualities.
- They are manufactured to measure in relation to the size of the pallet.
- They are presented folded, thus optimizing logistical costs of transport and storage.
- The assembly is ultra-fast, and one person can do it in a few seconds.

FEATURES

- ☒ Heavy duty
- ☒ Foldable.
- ☒ 100% Recyclable
