

CARDBOARD LAMINATES

CATEGORY

Thermal packaging

Cardboard laminates

DESCRIPTION

Cardboard laminates are versatile and robust solutions used in the packaging industry. Composed of multiple layers of cardboard bonded together, they offer superior strength and durability.

They are ideal for protecting products during storage and transportation, providing an effective barrier against impacts and vibrations. Additionally, they are a sustainable option, as they are made from recyclable materials.

Cardboard laminates can be customised in terms of size and thickness to meet the specific needs of each customer. They are widely used in sectors such as automotive, electronics, and consumer goods.

FEATURES

- ✓ 100% Recyclable
- ✓ Protection
- ✓ Recycled materials
