

CARTÙ® CARDBOARD SHEETS

CATEGORÍA

Protection and Securing

cArtù Interiors

DESCRIPTION

cArtù® cardboard sheets are an inner packaging solution made from corrugated cardboard, designed to protect, separate, fill, block and secure products inside the box during handling, storage and transport. Thanks to their lightweight, resistant and adaptable structure, they help absorb impacts, reduce vibrations and prevent movement, improving product safety throughout the entire logistics chain.

Available in thicknesses from **10 to 20 mm**, in different formats and paper qualities, cArtù® sheets make it possible to adapt inner protection to the needs of each product and logistics process. They can be supplied in **rolls** or in **cut formats**, both as **solid cardboard** and **open flute**, making them easy to integrate into packaging lines, void-fill solutions, separators and custom protective packaging.

They can also be manufactured with non-abrasive, waterproof or aluminium-coated cardboard to meet specific requirements for surface protection, moisture resistance or insulation. With cArtù®, Font Packaging offers a recyclable, lightweight and customisable packaging alternative to optimise inner protection and reduce incidents during transport.

FEATURES

- ✓ Inner protection for corrugated cardboard packaging.
- ✓ Cushioning against impacts, vibrations and movement during transport.
- ✓ Separation, filling and securing of products inside the box.
- ✓ Available in rolls, cut formats, solid cardboard or open flute.
- ✓ Lightweight, recyclable solution adaptable to different industrial sectors.
